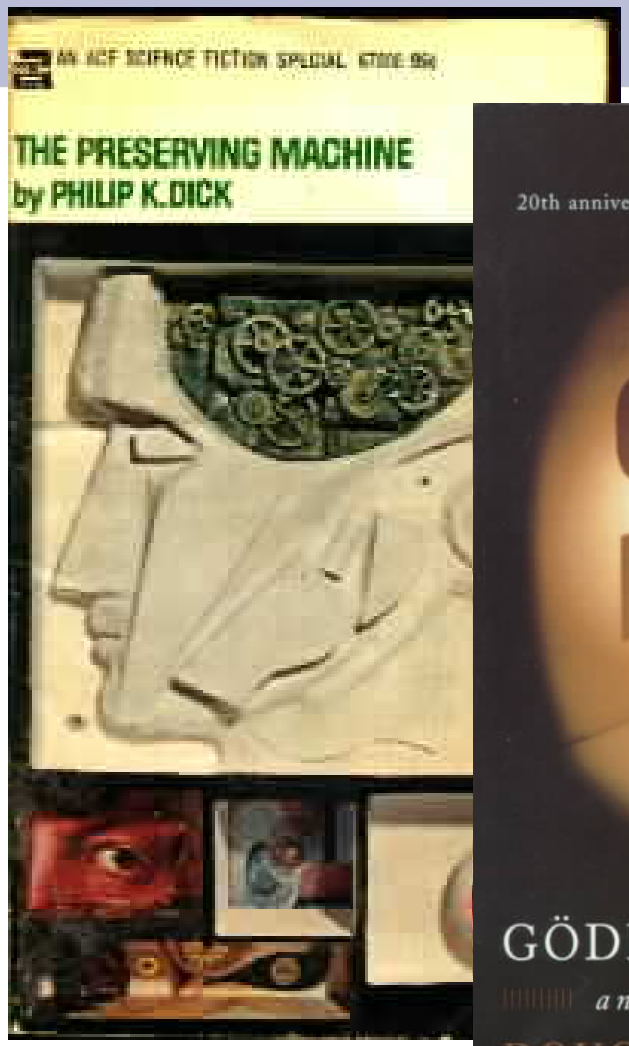
# Auralizing DNA

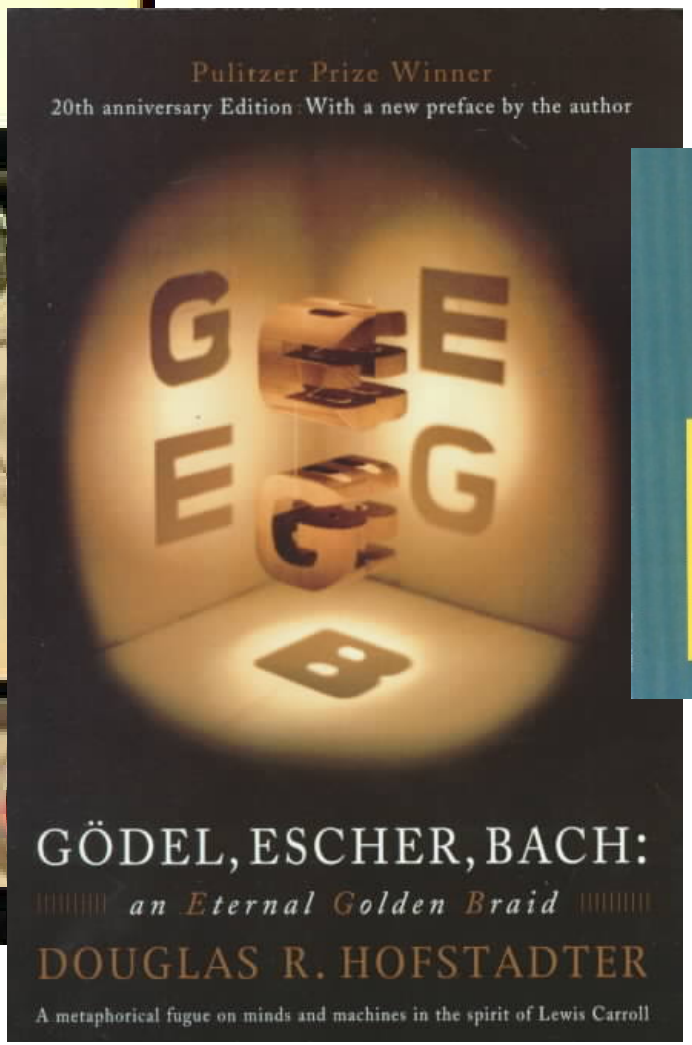
R. Mark Adams, Ph.D.

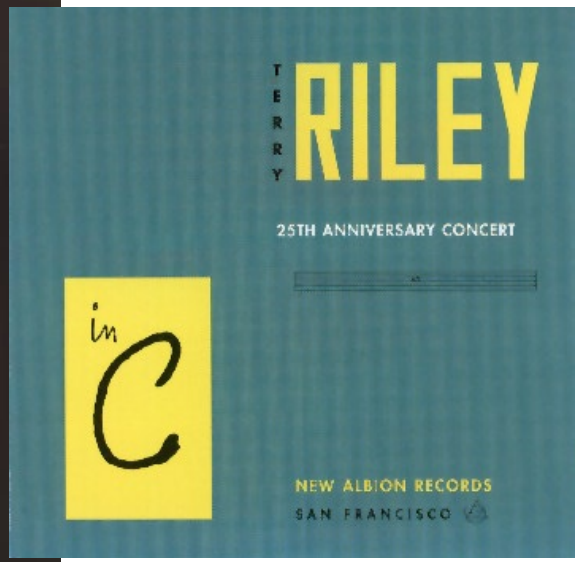
# Presentation Contents

- Inspirations
- Some facts about DNA to know and tell
- A (very) little bit of music theory
- Software and tools
- Putting it all together

# Inspirations







...and many more...

# Your DNA and you...

- Your DNA:
  - Contains the entire plan (more or less) for you
  - Compressed, about the same size as a DVD (3.2e9 bases, in 1 ASCII byte per base)
  - Differs about 1 every thousand bases from the next person

# Like music, DNA is a structured and layered string of data...

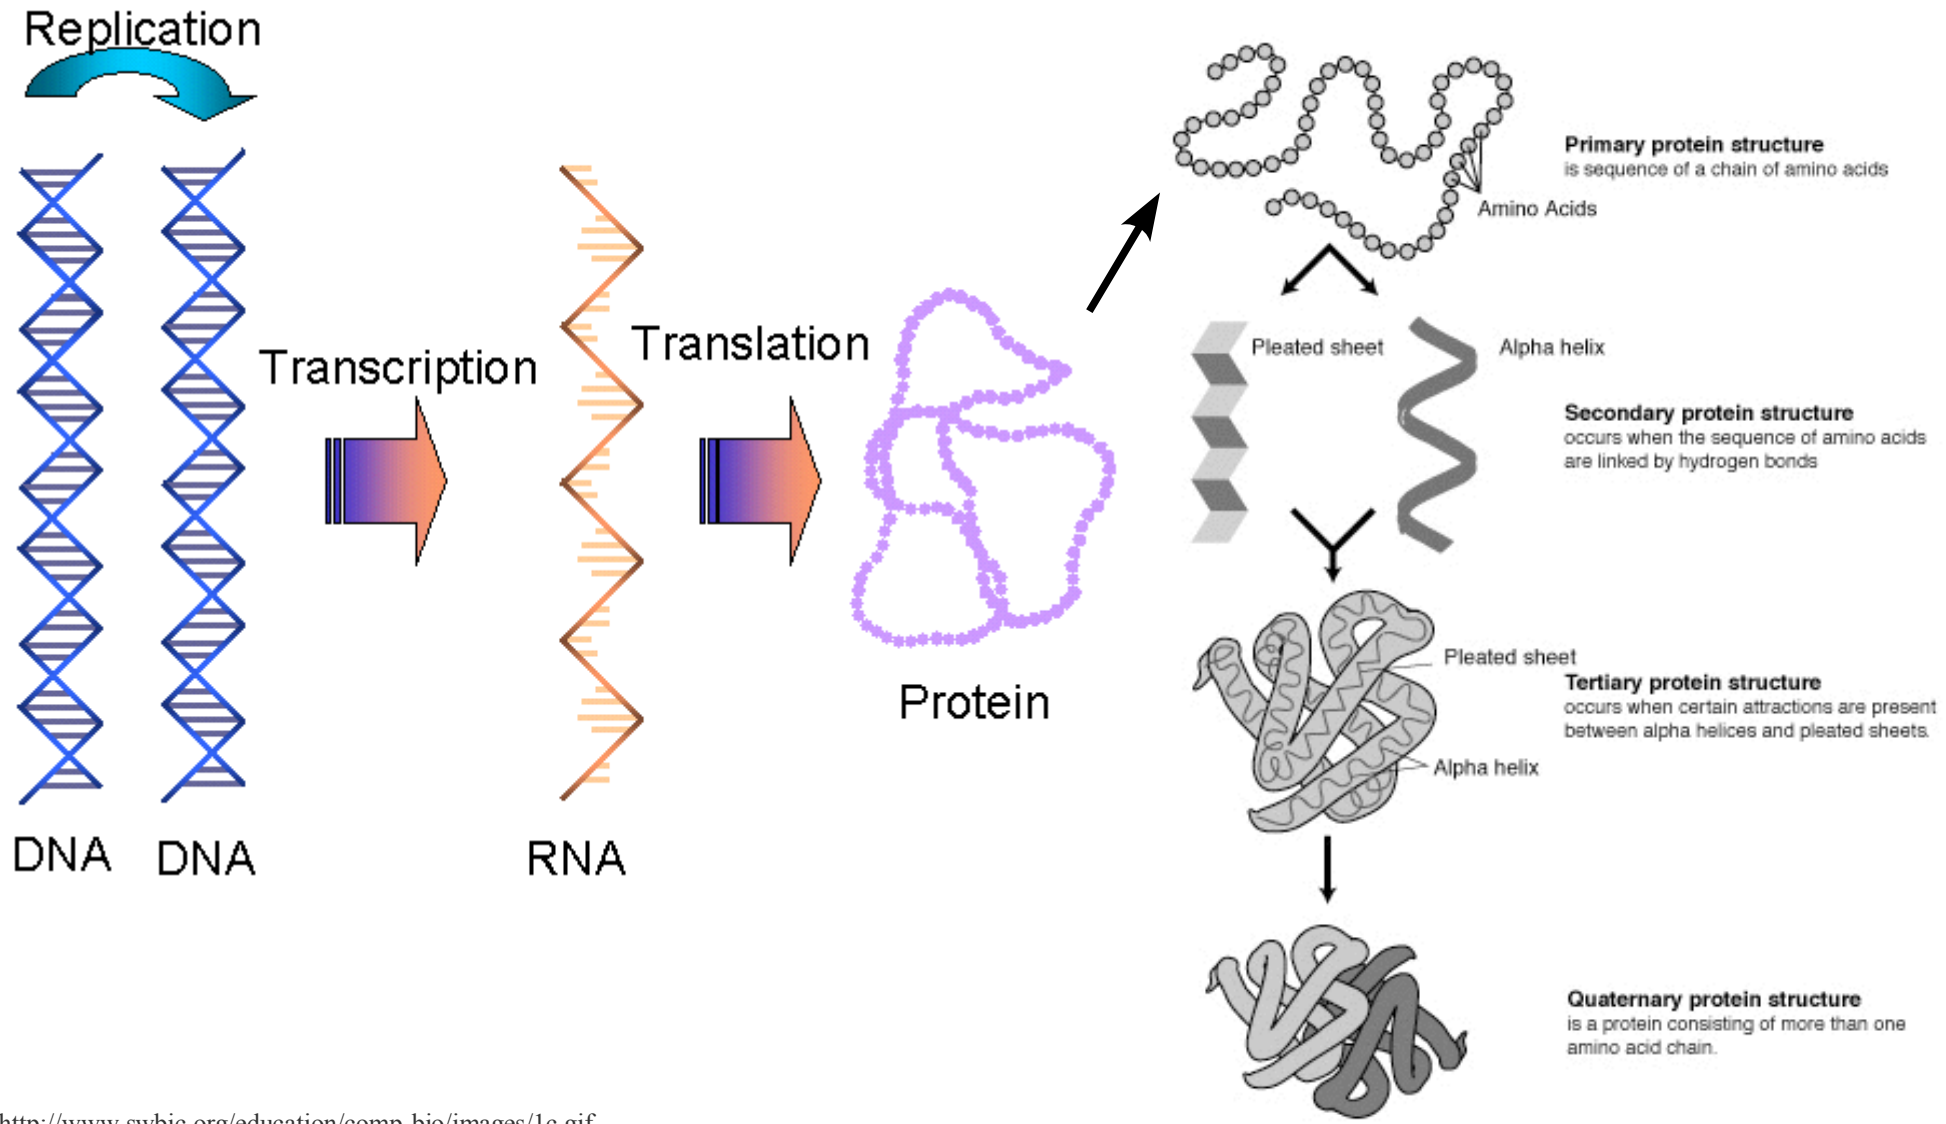
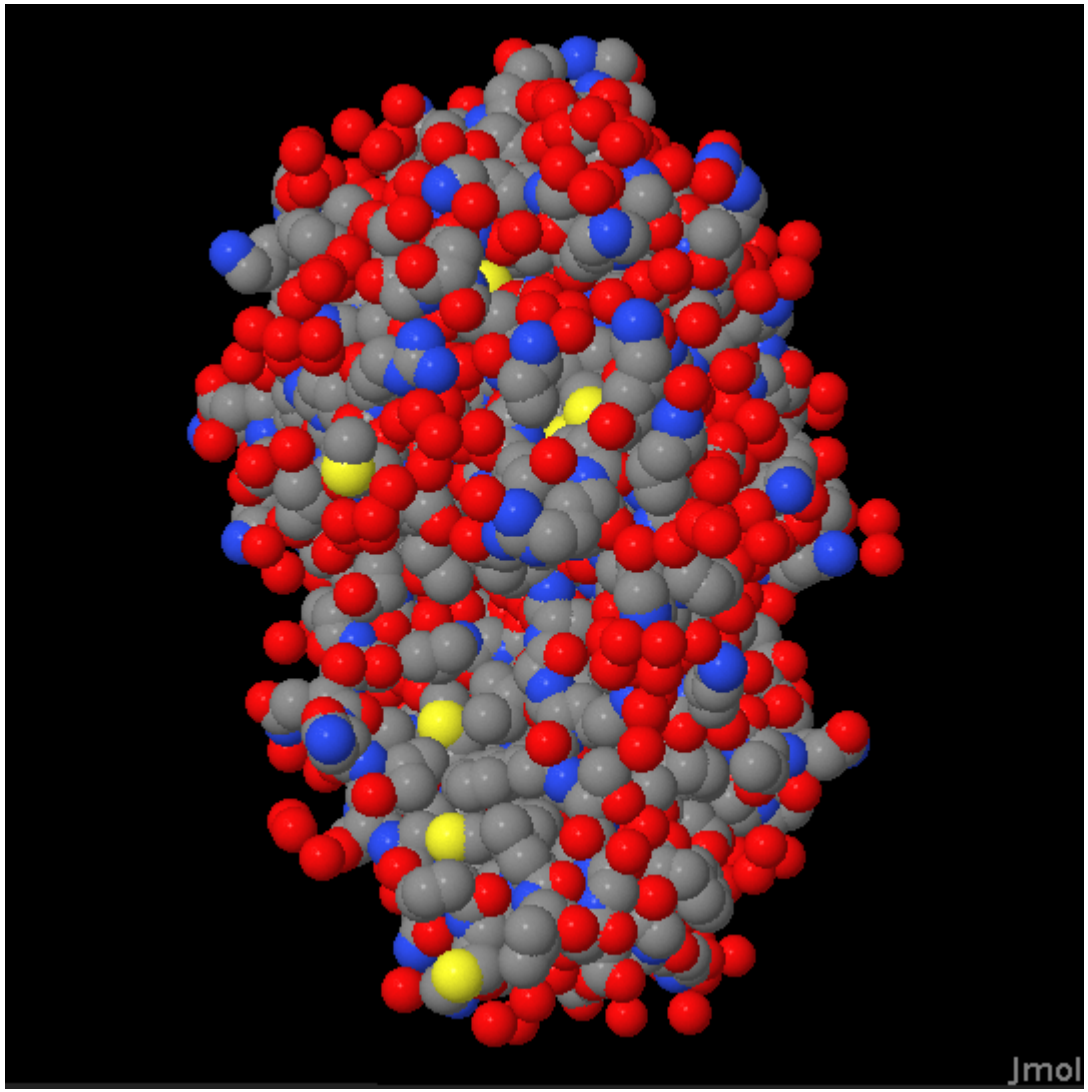
# DNA contains coded information at many layers...



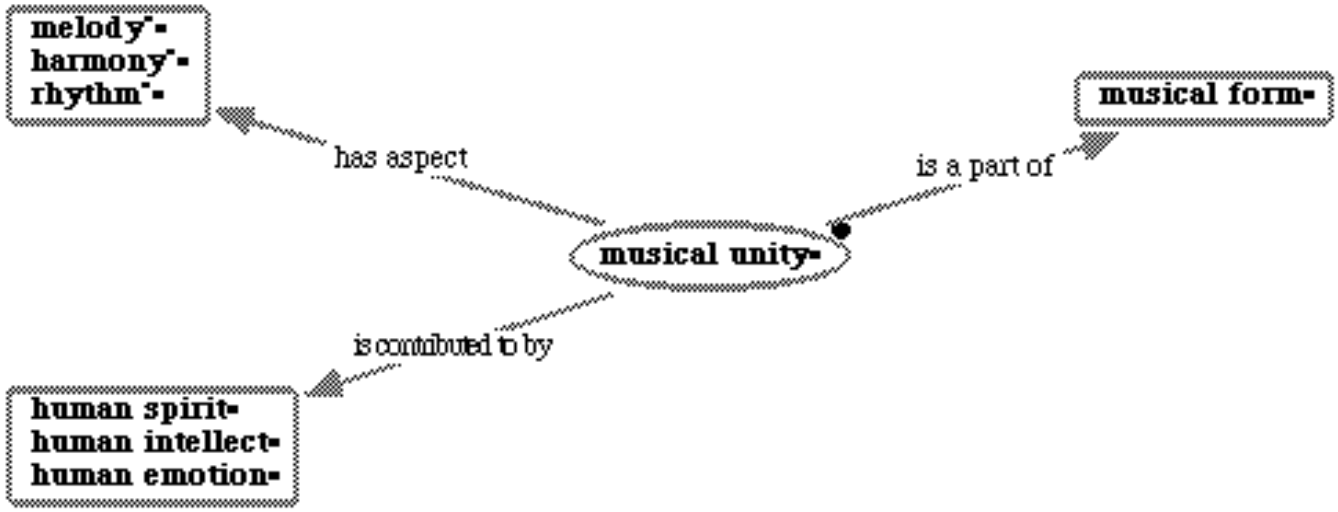
http://www.swbic.org/education/comp-bio/images/1c.gif
http://en.wikipedia.org/wiki/Protein_structure

# ... leading to fully formed and operational structures



# Music is very similar, where information at many layers...

- Rhythm
- Melody
- Harmony
- *et al.*



http://trumpet.sdsu.edu/M151/SN_10musicalunity.GIF

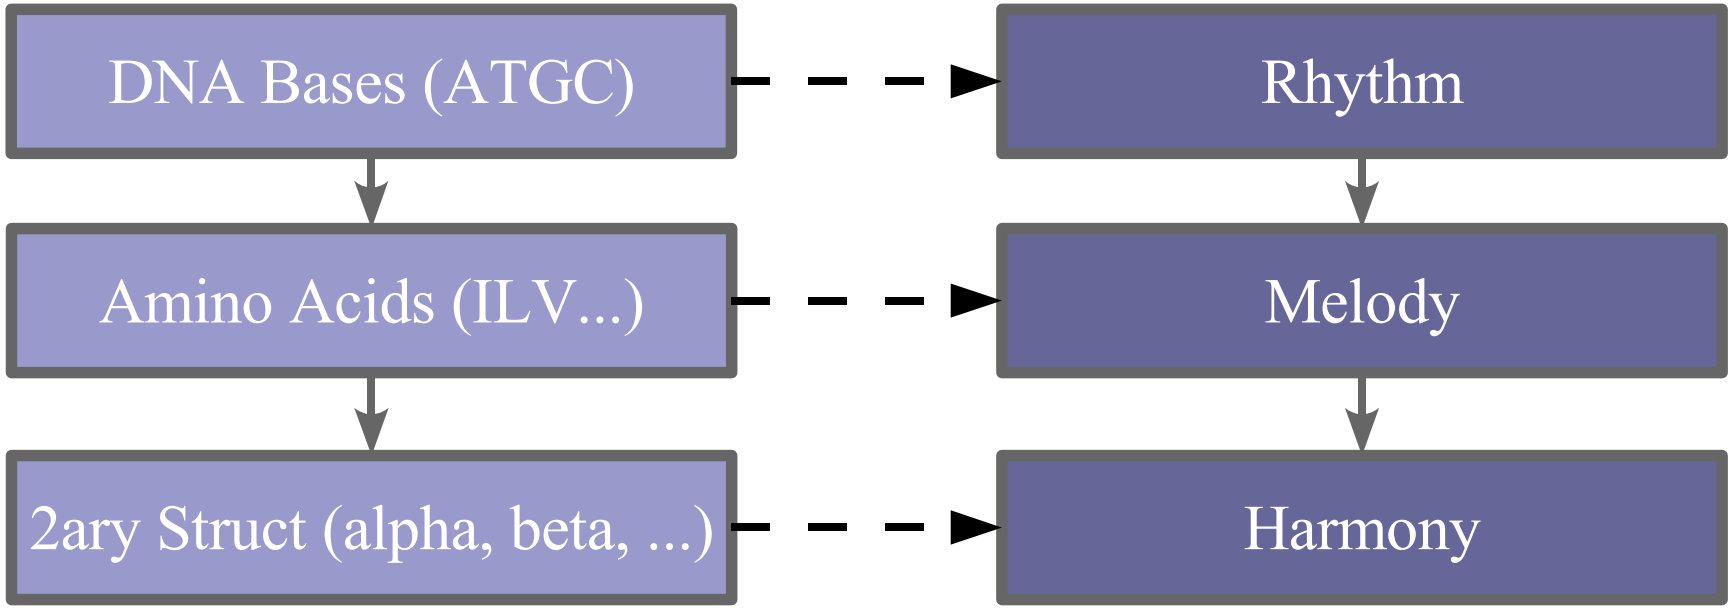
# Combine to produce finished works...

# A simple set of rules

- Almost the simplest possible set of rules yields interesting results
- I used transformation rules derived from “trance” style dance music
- Applied it to two sequences and compared the result

http://mrskingsbioweb.com/Genetics_files/image003.jpg

# Mapping the layers of information in DNA to musical

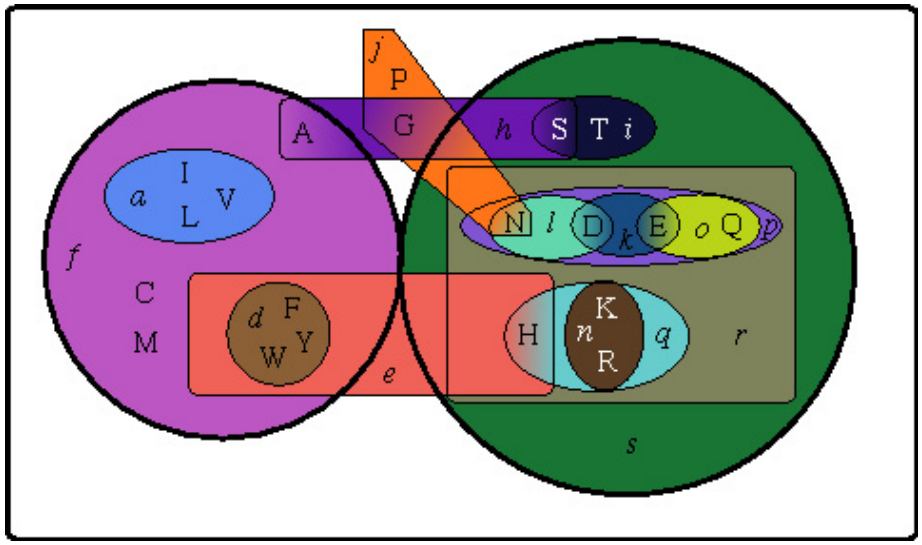


# Rhythm

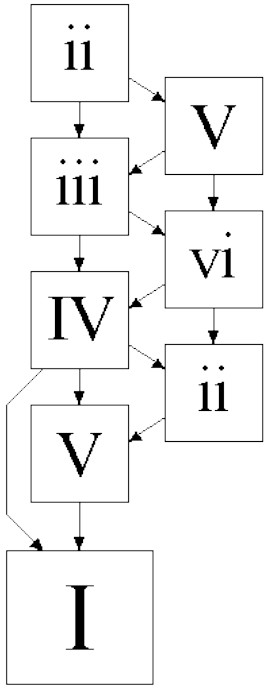
- Directly mapped each base of DNA to eighth notes in middle 'C'
- Added a “break” at starts and ends of protein translation, “*open reading frames*”

<<Play the “base track”>>

# Harmony



The Simple Map



- The harmony is drawn from the structural characteristics of the protein sequence
- Chord changes signaled at amino acid class changes

http://bmerc-www.bu.edu/description/aaclasses.html
http://chordmaps.com/part3.htm

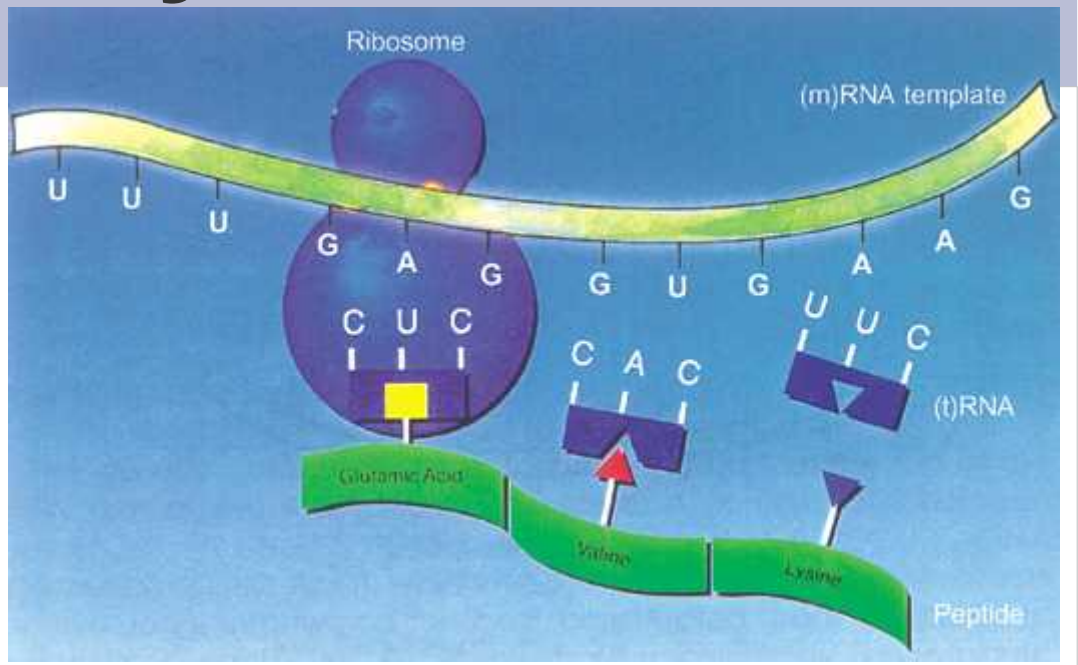
<<Play the "melody track">>

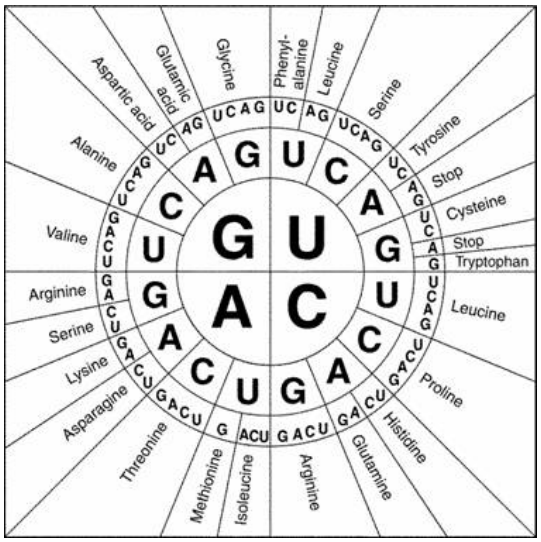
# Melody

- The melody line was derived from the actual DNA bases within each codon

- A>up an interval
- T>down an interval
- G>stay
- C>rest

- Intervals defined by current chord





http://www.littletree.com.au/images/dna10.jpg
http://mrskingsbioweb.com/Genetics_files/image003.jpg

# Results

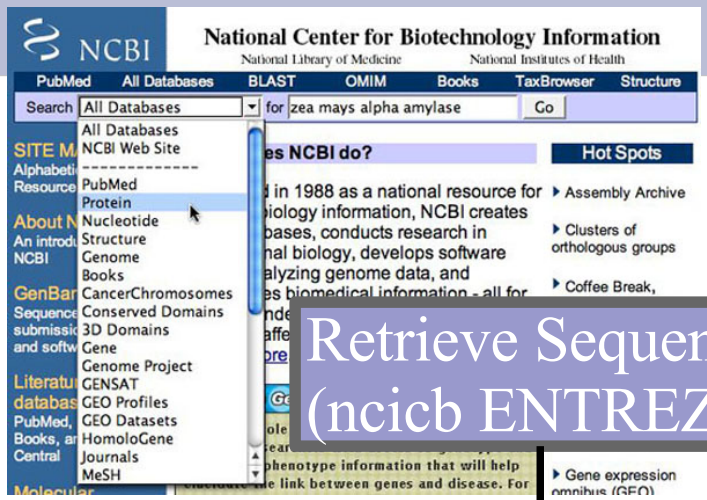
- After generating the musical parts, integrating and orchestrating them, listen to the results and see if they are distinct
- Obviously more complex rules can yield more complex peices

**Sequence #1**: A repetitive sequence that does not code for any proteins. (it is an ancient virus sequence integrated into the human genome)

**Sequence #2**: The coding sequence for Alcohol Dehydrogenase, a gene involved in alcohol detoxification.

<<Play segments of full pieces>>

# Technical Specifics



Retrieve Sequence (ncicb ENTREZ)

Custom python programs

Python-MIDI

Rhythm MIDI File

Melody MIDI File

Harmony MIDI File

Rosegarden Sequencer

Audacity Recorder

# Acknowledgments

- The tool developers
  - Python
  - Python MIDI
  - Rosegarden
  - Audacity
  - Linux
  - *et al.*
- And all the scientists of the genome project

- (and of course, Dorkbotters everywhere!)
